

1. **Subject:** EHL- Electrical System Safety at Public Swimming Pools

ATTENTION ALL PUBLIC SWIMMING POOL PROGRAMS

Attached is a letter regarding electrical system safety at public swimming pools. Local Health Departments may want to send this letter to public swimming pools along with their annual permit application or as a separate mailing or e-mailing.

The letter **recommends** that pools evaluate the safety of their electrical systems on a regular basis.

This is a **recommendation** and **NOT** a requirement. If you receive questions from pools about this letter, please inform them that it is for informational purposes only and that any questions regarding the Electrical Code should be directed to the local building inspections department or a licensed electrician. This letter serves as a reminder to the pool facilities that electrical systems need to be maintained and that they may want to get them inspected on a regular basis to make sure that they are safe.
